Below are some commonly used concepts and terms to reference and assist you in understanding accessibility guidelines. Digital Accessibility: Designing learning so everyone can access and use it. WCAG (Web Content Accessibility Guidelines): The main global guidelines for making digital content accessible. POUR Principles: WCAG's four basics: Perceivable, Operable, Understandable, Robust. Perceivable: Learners can get the information (e.g., captions, alt text, good contrast). Operable: Learners can use and navigate everything (keyboard, mouse, voice, etc.). Understandable: Content is clear, consistent, and easy to follow. Robust: Content works across devices, browsers, and assistive technologies over time. Alt Text: Short description that explains the purpose/meaning of an image. Captions: On- screen text that is synchronous with spoken audio (and key sounds) in videos. Transcripts: Full written text version of the audio/video. Keyboard Navigation: Using a keyboard (Tab/Enter/Arrow keys) to access and control all features. 4 The sequence in which content is presented to users is based on how elements are tagged in the PDF. Screen readers rely on reading order to present content correctly. In a properly tagged PDF, content is read from top to bottom according to the structure of the Tags tree. performance eg 01 vse se cy ae. a ART ve ere ta sae neon OC Be ET 16 san stn Senaas cf agectvestonae says Tor cease ht

## Tab order

The sequence in which users navigate interactive elements-such as links, form fields, and buttons - using the Tab key. A logical tab order is essential for keyboard-only users and supports accessibility compliance. 22
