Knowledge Check

Module 2: Accessible Microsoft Word

Designing and Delivering Accessible Online Courses. Licensed CC BY 4.0.

This is the printable version of the interactive knowledge check on the course website. 6 questions. Circle one answer for each, then check your responses against the answer key at the end.

Questions

1. How do you make a line of text a real heading in Microsoft Word?

A. Apply a Heading style from the Styles gallery B. Make the text bold and increase the font size C. Underline it and centre it D. Put it in a text box

2. Where do you set a Word document's title?

A. File, then Info, then the Title field under Properties B. Insert, then Header C. Home, then Styles, then Title D. Layout, then Page Setup

3. Where do you set the document language?

A. Review, then Language, then Set Proofing Language B. File, then Options, then General C. Home, then Font D. View, then Read Mode

4. Why should a data table have a marked header row?

A. So a screen reader announces the column name with each value B. So the table prints on one page C. So the header repeats in the table of contents D. So the table can be sorted

5. Which link text is accessible?

A. Download the lab safety guide (PDF) B. Click here C. <https://example.edu/files/doc12.pdf> D. Read more

6. What is the correct conclusion about the built-in Accessibility Checker?

A. It is a starting point; some failures must be found manually B. It finds every accessibility problem C. It only works on documents under ten pages D. It replaces the need for alternative text

Answer key

1. A, Apply a Heading style from the Styles gallery

Only a Heading style creates structure. Visual formatting looks like a heading but tells assistive technology nothing.

2. A, File, then Info, then the Title field under Properties

File, Info, Properties, Title. It takes seconds and is almost always missed.

3. A, Review, then Language, then Set Proofing Language

Review, Language, Set Proofing Language. Assistive technology uses this to choose pronunciation.

4. A, So a screen reader announces the column name with each value

With a marked header row, a student hears ‘Trial 2, mass 4.1 grams’ rather than an unattached ‘4.1’.

5. A, Download the lab safety guide (PDF)

Link text should describe the destination, because screen reader users often navigate by a list of links out of context.

6. A, It is a starting point; some failures must be found manually

The checker catches structural omissions. It cannot judge whether alt text is meaningful or whether contrast is adequate in every case.
