Knowledge Check

Module 3: Accessible Microsoft PowerPoint

Designing and Delivering Accessible Online Courses. Licensed CC BY 4.0.

This is the printable version of the interactive knowledge check on the course website. 5 questions. Circle one answer for each, then check your responses against the answer key at the end.

Questions

1. Why should slides be built from layouts rather than blank slides with text boxes?

A. Layouts define reading order and structure B. Layouts make the file smaller C. Layouts prevent the file being edited D. Layouts automatically add captions

2. Why must every slide have a unique title?

A. Screen reader users navigate a deck by slide title B. It is required for printing handouts C. It sets the file name D. It controls the slide transition

3. Where do you check the order in which slide content is read?

A. Home, then Arrange, then Selection Pane B. Design, then Slide Size C. Transitions, then Timing D. Insert, then Text Box

4. The accessibility checker passes your slide, but the body text is 12 point and low contrast. What is true?

A. The slide may still be inaccessible; font size and contrast need manual review B. The slide is compliant because the checker passed C. Font size is not an accessibility concern D. Contrast only matters for images

5. What is the minimum contrast ratio for normal-size body text under WCAG 2.1 Level AA?

A. 4.5 to 1 B. 2 to 1 C. 3 to 1 D. 7 to 1

Answer key

1. A, Layouts define reading order and structure

Placeholders in a layout carry reading order. Text boxes dragged onto a blank slide are read in the order they were added.

2. A, Screen reader users navigate a deck by slide title

Slide titles are how a deck is navigated non-visually. Ten slides called 'Results' is ten identical entries.

3. A, Home, then Arrange, then Selection Pane

The Selection Pane lists everything on the slide. Verify rather than assume, because the order is not visual.

4. A, The slide may still be inaccessible; font size and contrast need manual review

This is demonstrated in the module. The checker does not flag every font size or contrast problem.

5. A, 4.5 to 1

4.5:1 for normal text at Level AA. Large text may be 3:1, and 7:1 is the Level AAA threshold.
