PDF Reading Order Types

Students may access PDFs in a variety of ways, including screen readers, text-to-speech tools, or Adobe's Read Out Loud feature. Others may navigate documents using a keyboard rather than a mouse. PDFs can also be opened on mobile devices or e-readers, which may reflow content into a single column. The order in which content is read or navigated is determined by the PDF's reading order- not its visual layout. Reading order should be set so content is presented clearly and logically for every learner.

Tag Order

The sequence of elements in the Tags tree determines how screen readers read content. When a PDF is properly tagged, content is read from top to bottom in a logical order. ® - o - B a 'I om >a ee "oe ft > x2 'Track progress and foster a culture that rewards >=' grown - ae > eon 2 a+ >a > ore a >a >a 8. >a = >a Q
